EDUCATION

Dhirubhai Ambani University

B.Tech in Information and Communication Technology

Gandhinagar, India

Nov. 2020 – May 2024

TECHNICAL SKILLS

Languages: Java, C/C++, SQL

Frameworks & Tools: Spring Boot, FastAPI, LangGraph, Kafka, Docker, Kubernetes, Redis, Git, Azure

Databases: PostgreSQL, MongoDB, MySQL

Core Concepts: Data Structures & Algorithms, OOP, OS, DBMS, Computer Networks, System Design, LLMs, RAG

EXPERIENCE

Software Engineer

Sept 2024 – Present

Wio Bank PJSC

Gurugram, India

- Architecting and building WioGenie, a multi-agent AI system from scratch using FastAPI, LangGraph, LiteLLM, Claude, MCP, and A2A for production incident investigation through citation-backed reasoning across code, logs, Jira, and RCA documents; approved by engineering leadership for adoption.
- Owned Spring Boot-based lending microservices powering multiple loan products, designing core loan lifecycle orchestration, service integrations, and scalable REST APIs across Retail and SME portfolios.
- Architected a Kafka-based lending billing engine with partition-aware processing, idempotent workflows, and automated reconciliation, achieving 99% financial accuracy across 100K+ monthly statements.
- Built an asynchronous lending notification system using Kafka message queues with idempotent consumers processing 800K+ monthly events and improving on-time repayments by 40% with <1% delivery failures.
- Delivered FD-backed SME lending journeys by designing secured credit workflows, eligibility computation, approval pipelines, and risk validations, increasing SME customer conversion and retention by 42%.
- Optimized high-throughput credit card dashboard APIs via query tuning, indexing, and caching, supporting high-concurrency requests, reducing p95 latency from 3s to 1s, improving throughput by 50% under peak load.
- Implemented an event-driven leverage eligibility pipeline for margin trading, processing salary uploads and file events to maintain consistent blob-based records.

Software Engineer Intern

Feb 2024 – Aug 2024

Wio Bank PJSC

Remote, India

- Contributed to distributed backend services for credit card, installment, and SME lending platforms using Spring Boot and REST APIs, supporting thousands of active customer accounts.
- Built a Spring Boot-based deduplication API with unit-tested validation integrated into underwriting pipelines, leveraging hashing and database constraints to reduce latency by 50%.
- Implemented bank-initiated and customer-initiated credit limit increase flows with audit logging and approval workflows, improving operational turnaround time by 30%.

PROJECTS

AES Cryptosystem via Double Pendulum | C++, Cryptography, AES, Chaos Theory

- Designed an AES encryption system with chaos-driven key generation using double-pendulum dynamics to enhance entropy, randomness, and resistance to key predictability.

Splitwise Backend Clone | Java, Spring Boot, REST APIs, MySQL

- Developed a scalable expense management backend supporting accurate expense splitting, debt simplification, settlements, and balance reconciliation via RESTful APIs.

POSITION OF RESPONSIBILITY

Chairperson, IEEE Society DAU

Dec 2022 – May 2024

Dhirubhai Ambani University

Gandhinagar, India

- Led a 25+ member team and organized large-scale technical events generating 25L+ in revenue.

Finance Executive, DCEI

Jun 2022 – Jun 2023

Dhirubhai Ambani University

Gandhinagar, India

- Managed finances for institute-level competitions with 11k+ participants generating 10L+ in revenue.
