

Pranav Patil

Software Engineer II | Backend, Distributed Systems & Applied AI

+91 7623955135 | pranavnarendrapatil.2104@gmail.com | linkedin.com/in/pranav-patil | github.com/PranavPatil-21

EDUCATION

Dhirubhai Ambani University (DA-IICT)

B.Tech in Information and Communication Technology

Gandhinagar, India

Nov. 2020 – May 2024

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL

Frameworks & Tools: Spring Boot, FastAPI, Kafka, Docker, Kubernetes, Redis, Git, Azure, CI/CD

Databases: PostgreSQL, MongoDB, MySQL

Core Concepts: Data Structures & Algorithms, OOP, OS, DBMS, Computer Networks, Distributed System Design, Event-Driven Architecture, LLMs, RAG, Agentic AI Systems

Domain: Payments & Checkout Integrations (Apple Pay), Digital Lending, Instalments, Credit Cards, Margin Trading

EXPERIENCE

Wio Bank PJSC

UAE digital bank; Retail & SME lending, credit cards, instalments, margin trading

Gurugram, India

Feb 2024 – Present

Software Engineer II

Jul 2026 – Present

- Building the Wio × Apple Pay integration, the **first Apple Pay Installments launch in the GCC market**, letting customers select Wio Installments directly within the Apple Pay checkout flow.
- Designing the integration across Apple Pay payment orchestration, Wio credit and eligibility services, and real-time instalment plan selection; owning service contracts, idempotency, and failure handling so eligibility, approval, and settlement stay consistent across the payment and lending platforms.

Software Engineer

Sept 2024 – Jun 2026

- Architected and built WioGenie, a multi-agent AI system for production incident investigation that correlates code, logs, Jira, and RCA history and returns **citation-backed root-cause analyses** engineers can verify; approved by engineering leadership for org-wide rollout and running against live incident traffic.
- Owned Spring Boot lending microservices powering multiple loan products: loan lifecycle orchestration, service integrations, and REST APIs across Retail and SME portfolios.
- Architected a Kafka-based lending billing engine with partition-aware processing, idempotent workflows, and automated reconciliation, achieving **99% financial accuracy** across 100K+ monthly statements.
- Built an asynchronous lending notification system using Kafka message queues with idempotent consumers processing **800K+ monthly events**, improving **on-time repayments by 40%** with <1% delivery failures.
- Delivered FD-backed SME lending journeys by designing secured credit workflows, eligibility computation, approval pipelines, and risk validations, increasing SME customer **conversion and retention by 42%**.
- Optimized high-throughput credit card dashboard APIs via query tuning, indexing, and caching, cutting **p95 latency from 3s to 1s** and lifting peak throughput 50% on the bank's highest-traffic credit surface.
- Built the event-driven leverage eligibility pipeline for the margin trading launch, processing salary-upload and file events.

Software Engineer Intern

Feb 2024 – Aug 2024

- Contributed to Spring Boot services for credit card, instalment, and SME lending platforms serving 1000s of customers.
- Built a unit-tested deduplication API for underwriting pipelines using hashing and DB constraints, **50% lower latency**.
- Shipped bank- and customer-initiated credit limit increase flows with audit trails and approvals, **30% faster TAT**.

PROJECTS

AES Cryptosystem via Double Pendulum | C++, Cryptography, AES, Chaos Theory

[GitHub](#)

- AES encryption with chaos-driven key generation from double-pendulum dynamics for higher key entropy.

Splitwise Backend Clone | Java, Spring Boot, REST APIs, MySQL

[GitHub](#)

- Expense-splitting backend with debt simplification, settlements, and balance reconciliation exposed over REST APIs.

LEADERSHIP

Chairperson, IEEE Student Branch & Finance Executive, DCEI, Dhirubhai Ambani University

2022 – 2024

- Led a 25+ member team organizing technical events generating **INR 25L+ revenue**; managed event finances.
